

From Knowledge to Action in Northern Indigenous Communities: Collaborative Research

Sylvie Blangy, CEFE, CNRS

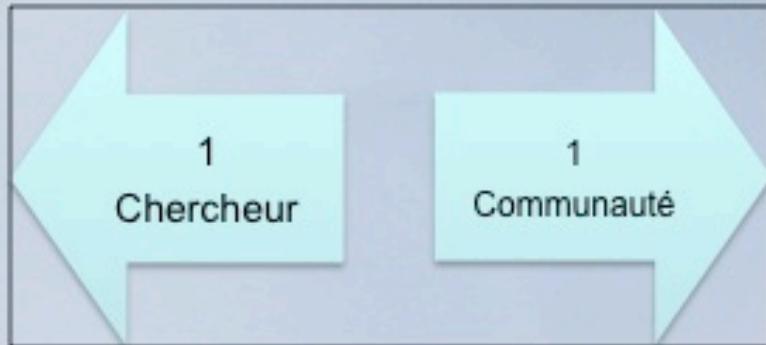

Holly Donohoe, University of Florida

Ethnobiology Congress, Montpellier

Photos; Jean-Louis Martin & Sylvie Blangy

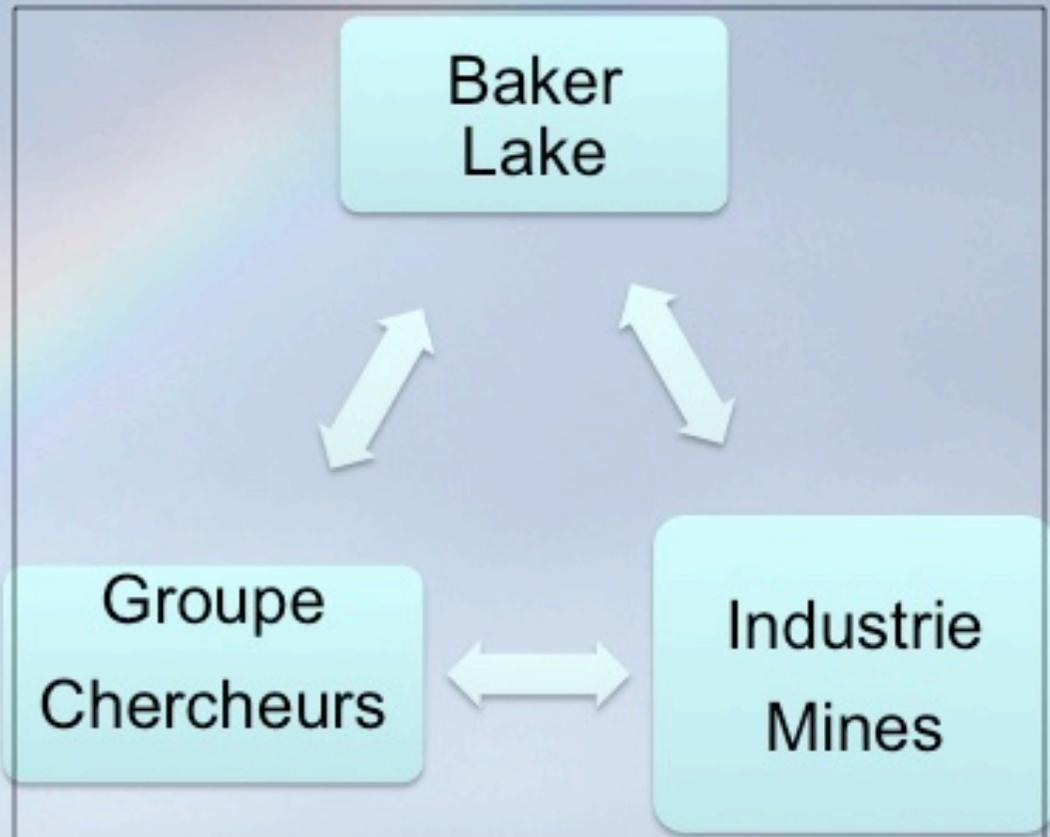

3 Collaborative research models

Mainstream research

Cross cutting research between 2 or 3 communities

Triangular collaborations; Community, university & industry alliances

Network of arctic researchers

3 groups

13 communities,

INUIT, Nunavut

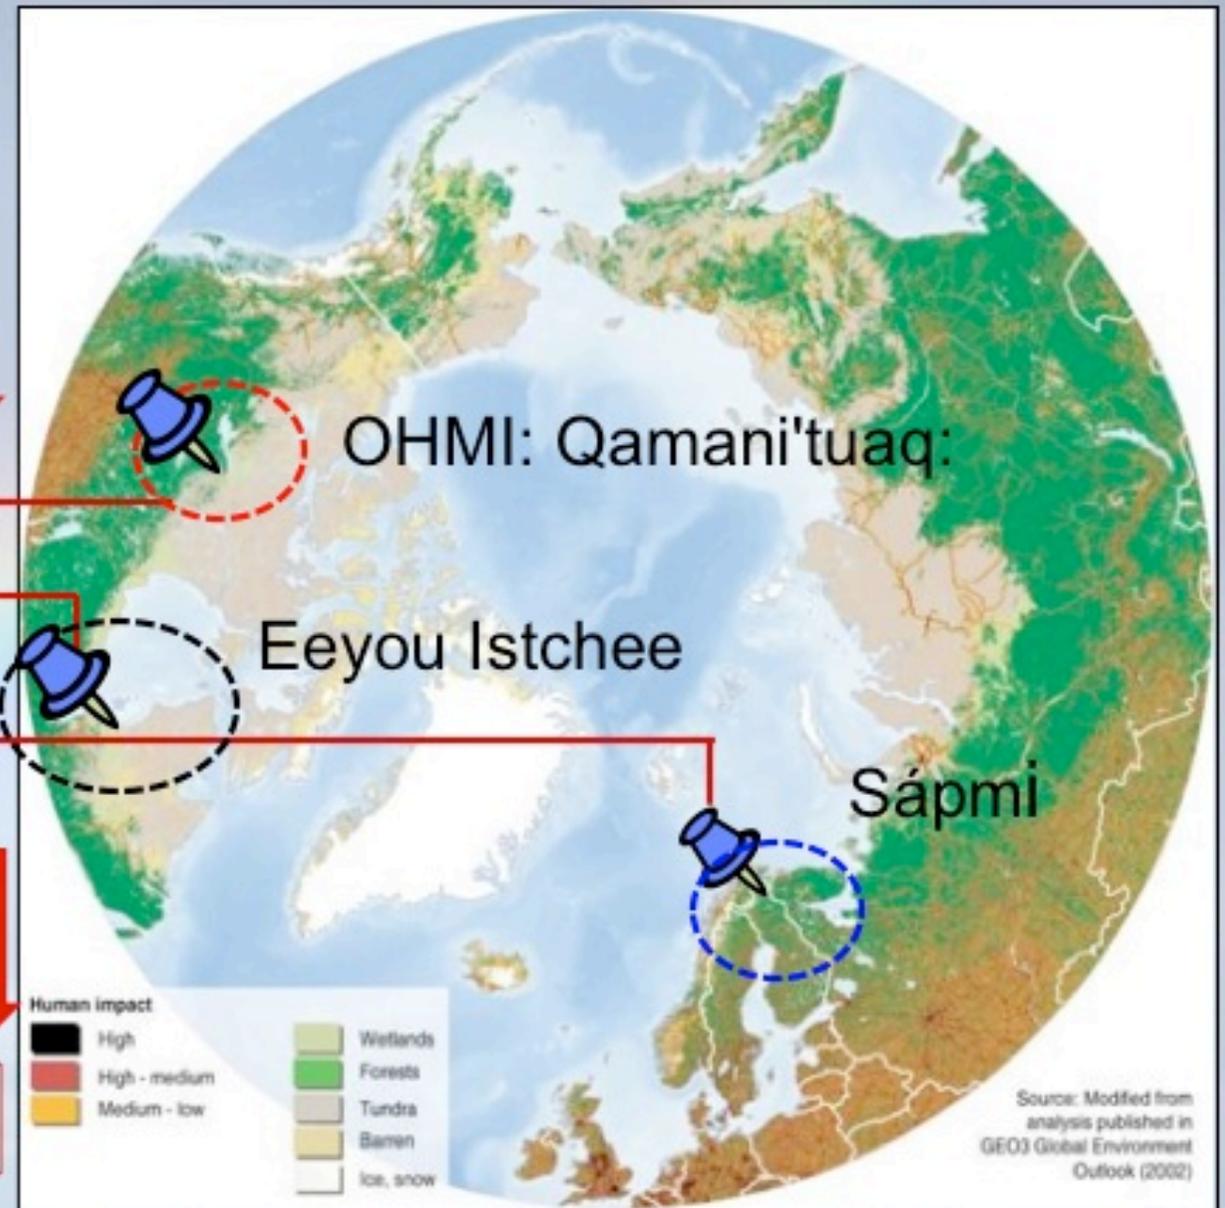

CRI, Québec

SAAMI, Sweden

10 universities

canadians, scandinavianians

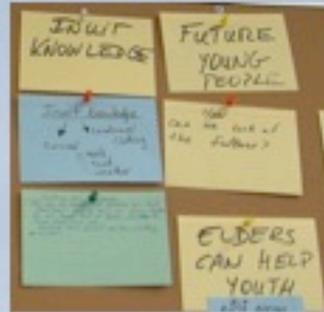

International Workshops, Ottawa, Québec, Paris

Social engagement techniques

Mapping

Free Listing

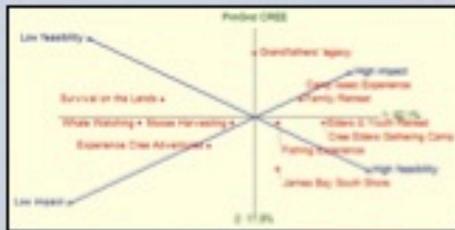

Stakeholder analysis

Factors at risk:
Force & Field;

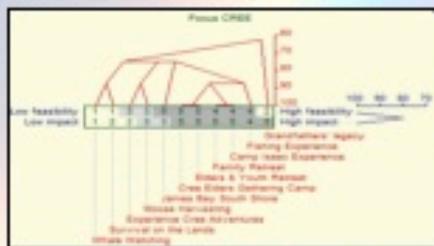

Socio-constructivist theory

Co-producing knowledge;
Domain analysis

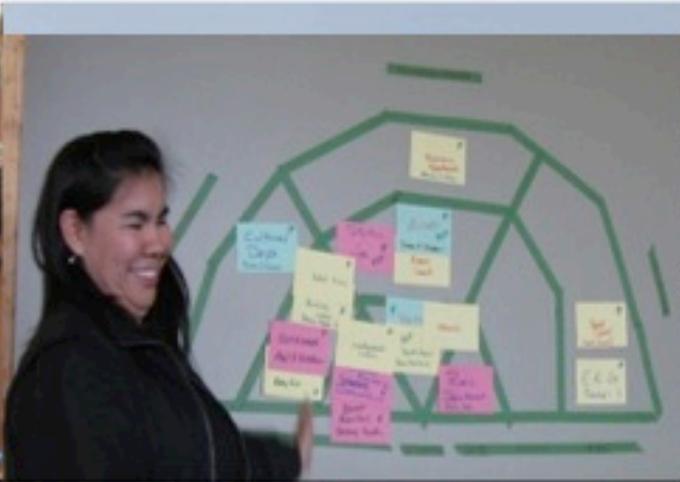

Comparing: causal dynamics

Evaluating; the wheel

Tool kit of techniques designed for the Cree of James Bay

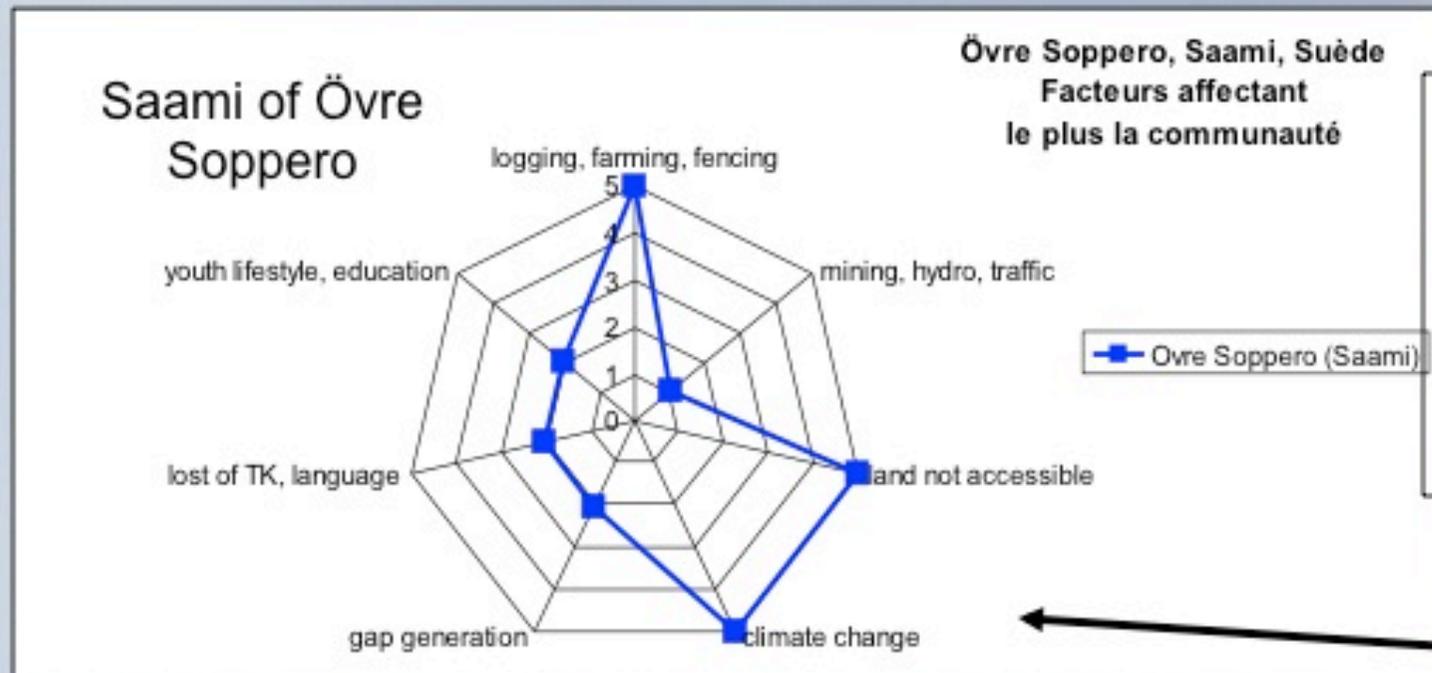

*Community-Based
Tourism:
COTA Facilitation Tool Kit*

*Jacques M. Chevalier, in collaboration with
Daniel J. Buckles, Zélie Larose-Chevalier and Sylvie Blangy*

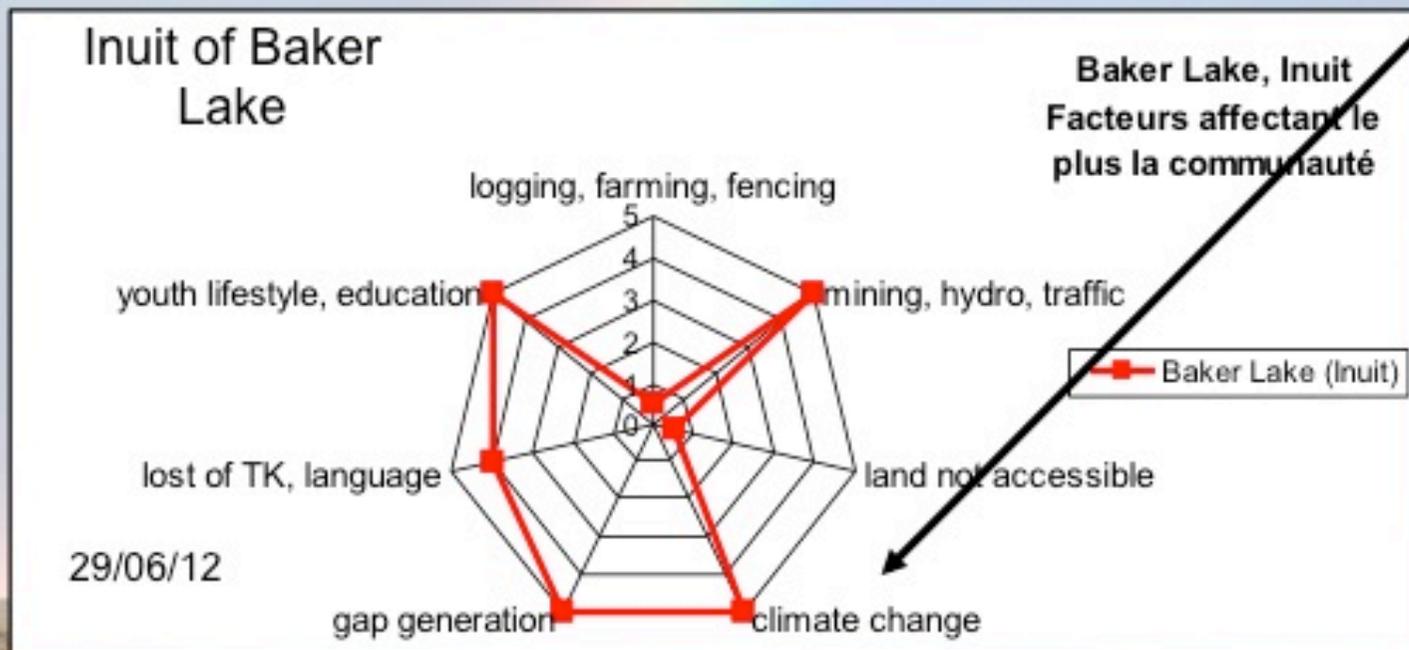

What are Factors affecting the most community members?

- Land access
- Cross border passage
- Logging

Climate Change

- Mining
- Generation gap
- Youth lifestyle
- Lost of traditional knowledge

Do you consider your community to be located within a biodiversity hot spot? A hot spot is an area of high biological diversity with a high rate of endemism

- [A : 22%] We do not live in an area of high biodiversity
- [B : 77%] We live in an area of high biodiversity

Exchange for Local Observations and Knowledge of the Arctic

How do we address those priorities?

Inuit/Saami collaborations & perspectives

Caribou livelihood book (Elders/Youth)

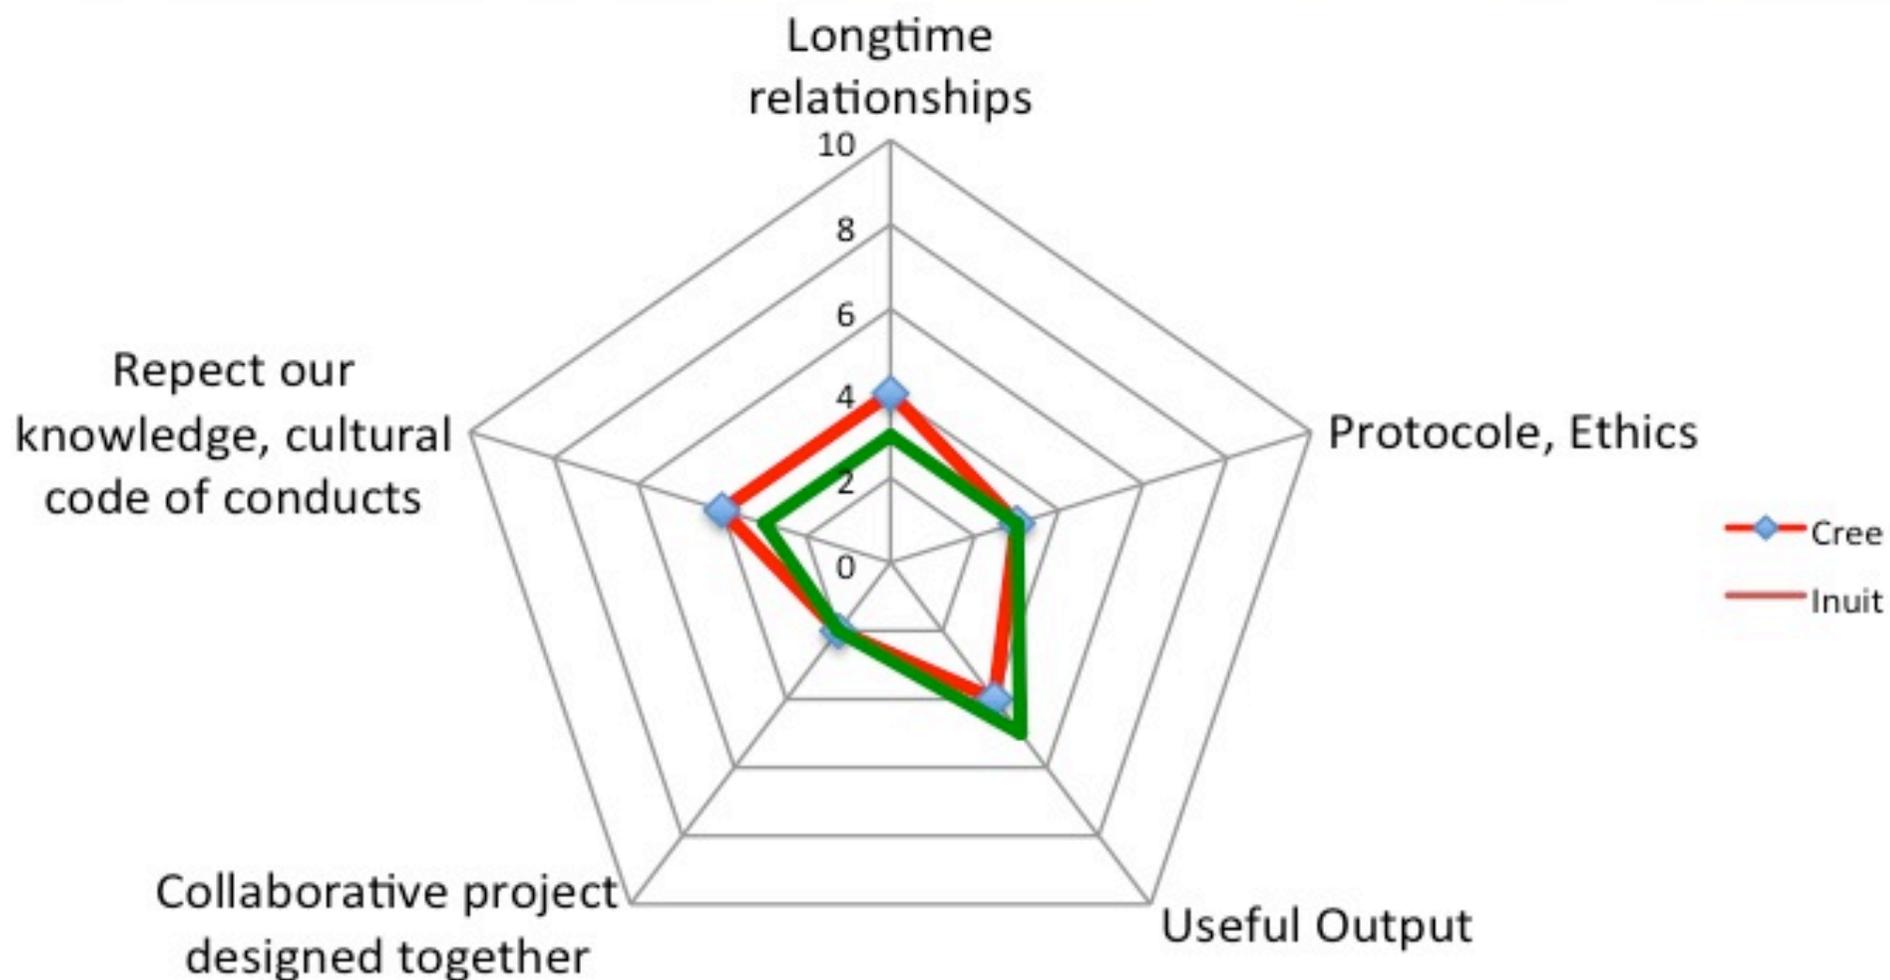

Exchange program Inuit/Saami Youth

Impact of mining development

Man & Environment Observatory

Collaborative research: what does it mean for the aboriginal communities?

TUKTU, PORO workshop in Ottawa, June 2009
